

COLOR VARIATION DISCLOSURE

APPLICABLE TO REGENX EPS PRODUCTS

Atlas Molded Products is committed to sustainability and transparency in our product offerings. This bulletin provides important information regarding the appearance of Atlas molded expanded polystyrene (EPS) products manufactured with **ReGenX technology**. ReGenX Technology is a breakthrough that closes the loop on our product life cycle and opens the door to a more sustainable tomorrow.

ReGenX EPS is manufactured using a blend of virgin, post-consumer recycled, and post-industrial recycled expanded polystyrene (EPS). As a result of this sustainable formulation, ReGenX EPS may exhibit a **subtle off-white coloration** that differs slightly from the bright white appearance of traditional EPS products.

This color variation is purely aesthetic and does **not** impact the product's:

- Thermal insulation performance
- Mechanical strength or dimensional stability
- Compliance with ASTM C578 and other applicable specifications

All ReGenX EPS products are subject to Atlas Molded Products' rigorous quality control standards to ensure consistent performance and reliability.

Customers should be aware that this visual difference is a normal characteristic of the recycled content and serves as a visible indicator of the product's sustainability benefits.
