

TALONGUARD TERMITE RESISTANCE

APPLICABLE TO TALONGUARD TREATED ELEVATION® AND THERMALSTAR® PRODUCTS

Termites love to live, work, and eat in comfortable and protected surroundings. All untreated insulations can potentially provide this environment. Most of the U.S. is susceptible to termite activity. It is important that insulation products and systems account for the potential of termite infestation.

Molded polystyrene insulation with TalonGuard is an important component in preventing this problem. It's made by a process that incorporates a termite resistant additive into the insulation during the manufacturing process. The additive is registered with the Environmental Protection Agency (EPA) for this application. Insulation with TalonGuard has been thoroughly tested, is safe for handling, and noncorrosive— and termites hate it.

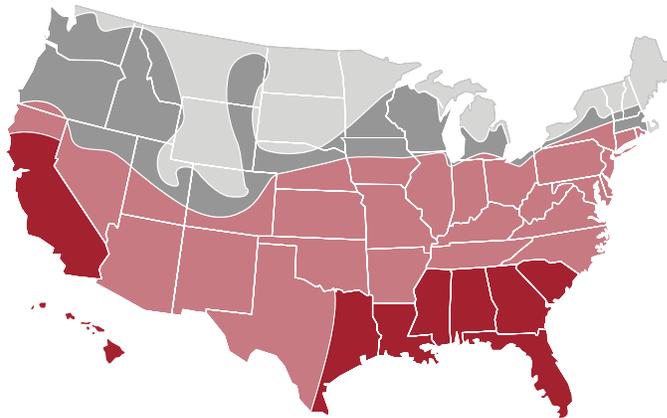

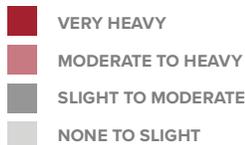

Elevation® and ThermalStar® Atlas molded polystyrene products with TalonGuard are termite resistant solutions for all types of construction. They are used in Structural Insulated Panels (SIPs), perimeter and under-slab foundation insulation, lightweight fill, and other building products and systems.

CODE COMPLIANCE

Atlas TalonGuard treated products are manufactured under an industry leading quality control program monitored by UL and further recognized in UL Evaluation Report ER16529-01 and ICC ES ESR-1962. Our insulation meets ASTM C578, “Standard Specification for Rigid, Cellular, Thermal Insulation”. Our geofoam meets ASTM D6817, “Standard Specification for Rigid, Cellular Polystyrene Geofoam”. TalonGuard treated products are proven to meet building code requirements.

- Incorporates EPA registered additive
- Meets ICC ES AC239 requirements for termite resistance foam plastic
- Suitable for use in all areas of termite risk, including Formosan
- Meets ground contact requirements of IBC Section 2603.8
- Meets ground contact requirements of IRC Section 320.5
