

# FOOD CONTACT DISCLOSURE

## APPLICABLE TO REGENX EPS PRODUCTS

Atlas Molded Products is committed to sustainability and transparency in our product offerings. This Food Contact Disclosure provides important information regarding Atlas molded expanded polystyrene (EPS) products manufactured with ReGenX technology and direct contact with food. ReGenX Technology is a breakthrough that closes the loop on our product life cycle and opens the door to a more sustainable tomorrow.

ReGenX EPS is manufactured using a blend of virgin, post-consumer recycled, and post-industrial recycled expanded polystyrene (EPS). While this formulation supports sustainability goals, it introduces variability in the raw material sources used. Due to the nature of the recycled content being incorporated into ReGenX, ReGenX EPS is not recognized to meet FDA direct food contact requirements at this time. Therefore, ReGenX EPS should not be used in applications where direct food contact compliance is required.

Atlas Molded Products remains committed to transparency and product stewardship. Customers requiring EPS products for direct food contact applications should consult with their Atlas representative to ensure suitable products are provided that meet FDA requirements.

As recycling technologies advance, Atlas anticipates offering a ReGenX product suitable for direct food contact in the future.
