

# STORAGE AND PROTECTION

## APPLICABLE TO THERMALSTAR® G PRODUCTS

ThermalStar® G products contain graphite infused core that reflect and absorb radiant energy, significantly increasing thermal performance (R-value) compared to standard EPS. As a closed-cell rigid insulation, ThermalStar improves building energy efficiency and is manufactured in compliance with ASTM C578, the Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.

**Protect from Sunlight:** GPS contains graphite particles that absorb heat. To prevent surface degradation and excessive solar heat buildup, store the product out of direct sunlight or cover it with a light-colored, UV-resistant opaque tarpaulin.

Factory-applied packaging is intended only for protection during transit. When stored outdoors or on the job site, insulation should be stacked on pallets at least 3" above ground level and fully covered with a weatherproof, opaque tarp. To prevent condensation, slit or remove the factory packaging. Damaged insulation should be removed and replaced.
